# Peercoin Instructions

## Check the account balance

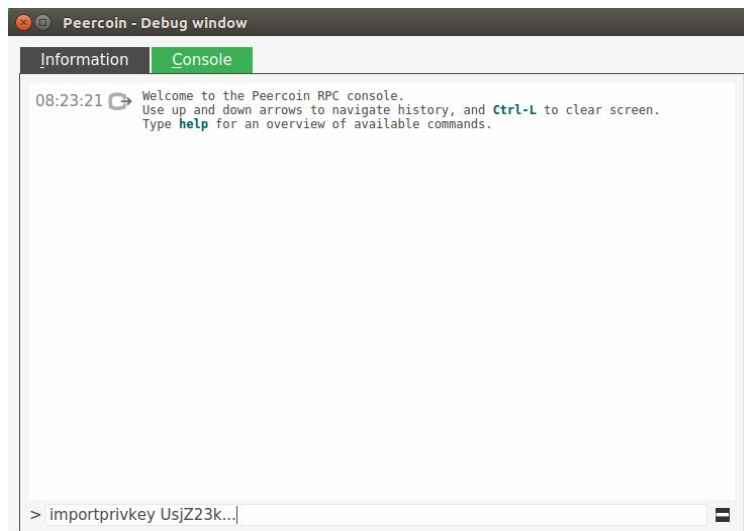

You can check that the Peercoins are still at the Public Address by visiting <https://explorer.peercoin.net/> and entering the Public Address in the search bar:

The screenshot shows the Peercoin Explorer interface. At the top, there is a navigation bar with links for Explorer, Movement, Network, Top 100, Markets, and API. The main content area displays the account address PHjyVcMHa11FFs7JWnKJQW8Rk3K5H35LZS and a balance of 20.00000000 PPC. Below this, there is a section for 'Latest Transactions' with a dropdown menu set to '10' entries. A table shows a single transaction with a timestamp of '10th Oct 2018 17:25:19', a hash of '3bb82332c5b2cb7073c13b385042f638a7251851f91f170fa3466fd55d4b2cb6', and an amount of '+ 20.00000000'. At the bottom of the page, there are social media icons, a footer indicating it is powered by Iquidus Explorer, and statistics for 392363 blocks and 8 connections.

## Using your Peercoins

You can use your Peercoins (e.g. send them to a friend or family member) by downloading the Peercoin Wallet software from <https://peercoin.net/download> and importing your Private Key by selecting **Help > Debug window > Console** and entering the command `importprivkey <Private Key>`:

The screenshot shows the Peercoin Debug window with the Console tab selected. The console displays a welcome message: '08:23:21 Welcome to the Peercoin RPC console. Use up and down arrows to navigate history, and Ctrl-L to clear screen. Type help for an overview of available commands.' At the bottom, the command prompt shows the command `> importprivkey UsjZ23k...` being entered.
